Re: revision of manuscript 19718

Dear Mrs Gong,

Thank you for the guidance in how to revise our manuscript. I have followed the instructions carefully, and hope you will find the revision satisfactory. We checked for plagiarism using the free web source www.dupllichecker.com and found no similarities of concern. We have dealt with the reviewers' comments and thought the points regarding limitations, application and clinical relevance were best placed in the Comments. All changes and further corrections have been made (see track changes). An audiotip file has been produced.

Yours sincerely, for all authors

Cordula Stover Dr. med. PhD
