

**Name of Journal:** *World Journal of Methodology*

**ESPS Manuscript NO:** 27645

**Manuscript Type:** Review

**Authors' reply to Reviewer's Report**

**Non-Allergic Rhinitis in children: epidemiological aspects, pathological features, diagnostic methodology and clinical management.**

**Reviewer N. 00186131**

*Reply:* the authors are glad that the reviewer appreciated the manuscript. As suggested by the reviewer, we touched upon the issue, as an extensive discussion on the role of soluble molecules and their relationship with IgE and ITS is beyond the aim of this mini-review. However, we found that such a suggestion is very stimulating to us, in the perspective of eventual studies.

**Reviewer N. 00503779**

*Reply:* the authors are glad that the reviewer appreciated the manuscript and judged it as being suitable for publication on the journal.

**Reviewer N. 00503695**

*Reply:* the authors revised some the manuscript according to reviewer's advice, as showed below:

- 1- the final title was changed;
- 2- the relationship between ARIA definition of AR and the classification seasonal/perennial have been specified;
- 3- a table comparing EAACI and WAO classification of NAR have been added to the manuscript;
- 4- the diagnostic features of methods for the measurement of nasal obstruction have been specified, according to the advice provided by the reviewer;
- 5- The correction on page 20 have been made;

- 6- Figure 2 was names as Table 2;
- 7- The specification on the use of nasal decongestant in children has been added;
- 8- The role of nasal irrigation as basic tool in the therapy of rhinitis has been specified;
- 9- The references have been updated according to journal guidelines;
- 10- Spelling and grammar corrections have been made;
