

Biostatistician Review Report

The data analysis is proceed on the SPSS 12 software. Least significant difference (LSD) is used to evaluate the differential efficacy of moxibustion treatment on UC rats among different groups. Error bar represents the standard deviation. In this work, p-values of less than 0.05(two-sided) are regarded as statistically significant. All the statistical methods are standard and have been widely used by scientists, engineers or scholars.
