Dear Karin:

This is to inform your reviewers that I have consulted with you on issues related to the experimental design and data analysis for your scholarly projects. I strongly support the current pancreatitis studies and data analysis detailing the clinical retrospective chart review and translational basic studies related to chronic alcoholic pancreatitis. We will continue to adjust our designs as we proceed through the specific aims of the studies as the new projects unfold, if necessary. I have been engaged in designing your experimental studies in the past, and I will be glad to continue our interactions.

I wish you the best in securing funding for this interesting and relevant project.

Sincerely,

Richard J. Kryscio, PhD
Professor, Statistics, and Chair, Department of Biostatistics
Director, Biostatistics Consulting Unit
