

According to the comments by the reviewer 02442330 (below), we have not made any corrections to the manuscript, but included the signed copyright assignments.

*“The authors present a study about an involvement of 5-HT in functional dyspepsia. Due to the prevalence of FD, it is important to reveal the mechanisms involved as a basis for the development of new therapies. The only shortcoming is the low number of subjects - discussed correctly by the authors themselves - making the results susceptible for a type II error.”*
