The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

(1) The two groups of patients (robotically assisted and standard laparoscopic surgery) are not comparable and so no meaningful conclusions may be drawn between the two groups
; So, we excluded the data of laparoscopic surgery.

(2) The authors might wish to comment on this as the more difficult cases (due to acute inflammation) were likely excluded from participation.

; Last line of discussion- we added 'However, we recommend that the more difficult cases (due to acute inflammation) were likely excluded from participation in an early period.'

3 References and typesetting were corrected

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,
