The statistical methods of this study were reviewed by Lin Zhang from Department of Epidemiology and Biostatistics, Shanghai Jiaotong University School of Public Health. Statistical methods were adequately and appropriately described when they were used to verify the results. The statistical techniques were suitable. Only homogeneous data were averaged. The number of observations (n) was given. There were no losses in observations. Statistical data were expressed as mean \pm SE. A $P < 0.05$ was considered to be statistically significant.
