

Name of Journal: World Journal of Gastrointestinal Surgery

ESPS Manuscript NO: 20611

This is a nice and well documented case report. I have a few point that should be revised before publication.

Thanks for reviewing this article and your comments.

1. I believe that the causes of gastric volvulus in non-operated stomach reported in the introduction should be deleted and reported only in the discussion section.

Changes have been made and the content was moved to the discussion section.

2. figure 2 is useless and should be deleted.

Figure 2 has been deleted.
