

29-Sept-2015.

To the Editorial Board of World Journal of Gastrointestinal Oncology:

We have read with interest your decision letter on behalf of the article whose title is "Multiple primary colorectal cancer: individual or familial predisposition?"

Thank you and the reviewer for the changes suggested to improve its quality. As it is shown afterwards, we have answered each suggestion, as well as we have pointed out the changes in the text, in different colour.

We hope that all the changes could make our study appropriate to be published in your journal.

Best regards,

Dr. José Perea, MD, Ph.D.

Reviewer

Major points:

As suggested by the reviewer, we have added a section in the text, before CONCLUSIONS, discussing tumour heterogeneity in CRC, with most of the references proposed.

Minor points:

- there are several grammatical errors (I detected 18 errors), and this is unacceptable. A mother toungue revision is needed before accepting the manuscript.

We have already done, adding the certificate of the reviewer.

- In section "familial predisposition", lane 8, after "Win et al" the reference must be cited.

Already done.
