

25th of November 2015

Dear Editor,

Please find enclosed the duplicate manuscript containing an electronic copy of the full-text manuscript in Word format.

Invited Commentary: Field of vision Nu.: ID: 00722438

Title: Sleep-Disordered Breathing and Stroke: A Relation to Be Considered

Authors: Ridvan Alimehmeti, Arba Cecia, Arsen Seferi, Ermir Roci.

We report an invited commentary: FIELD OF VISION about the ESPS Manuscript NO: 20710, Title: Stroke and sleep-disordered breathing: a relationship under construction, submitted for publication in World Journal of Clinical Cases and peer-reviewed by the first author of this commentary.

We reviewed the pertinent literature and comment on the important points of the Manuscript NO: 20710. There are some considerations that stress on the importance of the conclusions of the reviewed Manuscript. Furthermore some of the cited reviews in this commentary are thought to complete the Manuscript.

In this commentary the authors report their own clinical experience on existing relation between sleep-disordered breathing and multilacunar cerebral infarction probably due to chronically-altered cerebral blood perfusion during sleep.

The content of this commentary is original and it has not been published or accepted for publication, either in whole or in part, in any form. No part of the commentary is currently under consideration for publication elsewhere.

Sincerely yours,

Ridvan Alimehmeti
