

Manuscript NO.: 26797

Dear Editor

On behalf of all the authors, I would hereby like to thank you for your edit. We would also like to thank the reviewers for their comments.

After receiving the revised manuscript, we addressed each of the points raised by the reviewers and the editor (see below). We also updated the manuscript according to the Guidelines and Requirements for Manuscript Revision-Review. In the attachments you can find the audio file describing the final core tip.

(1) Reviewer NO.: 01192203

*This is a review article on pathophysiology of peritoneal carcinomatosis diffusion in colorectal cancer. The molecular aspects have been highlighted. Because the methodology of the review have been not explained, this can be considered as an educational article. Although rarely this kind of article can be considered innovative or add something, it's the first time that this topic has been reviewed in the current literature and could represent in the next future an excellent basis for researchers who would like to investigating the molecular mechanisms of the diffusion of peritoneal carcinomatosis. The article is well written, well correlated with figures and tables. The references seem adequate to the topic. A table that reassumes the paragraphs (detachment, transport, attachment, invasion) with a list of molecules/molecular pathway might help the reader in finding a specific topic of interest through the article. I think that the manuscript coul interesting for the readership of WJG and should accepted without any significant changes.*

We added a table on page 7 and 36, that reassumes the paragraphs with a list of molecules/molecular pathways.

(2) Reviewer NO.: 03292914

*This is an excellent review. The list of author's consist of professional and icon scientists what in my opinion fully affect onto educational publication status and will be for shure interesting for potential readers. The text is weel written, all cittations are made very professional and properly. I fully recomend without any additonal coments this text for publication.*

We thank you for your edit, and look forward to your decision,

Kind regards,

Lieselotte Lemoine, M.Sc.
