

September 10th, 2016

Dear Editor,

please find enclosed the revised version of our manuscript entitled: "MR enterography in Crohn's Disease: How We Do It and Common Imaging Findings".

In our revision we have tried to address all of the reviewers' comments by giving a point-by-point reply to each of their queries, and in particular we have modified our manuscript as suggested.

The paper has also undergone extensive English language revision for better readability.

We hope we have managed to significantly improve our manuscript and we are looking forward to reading your comments on it.

Kind regards (also on behalf of my Coauthors),

Emanuele Neri

Reply to REVIEWER #1

As requested by Reviewer 1, we have added in the paper that the target of our manuscript was to provide an overview of the current state-of-art of MR imaging in Crohn's disease, in order to better explain the MR protocol and the intestinal findings in all CD subtypes (active inflammatory or fistulizing/perforating or fibrostenotic subtype), highlighting the recent technical innovations in MR imaging.

Our manuscript was aimed at radiologists, however, being an invited paper, we have tried to offer an overview of the MR technique and findings, suitable also for the clinicians.

Reply to REVIEWER #2

According to Reviewer's request, we have included in our manuscript the comparison of MR imaging with the other imaging modalities.
