Comments to Authors:

Though, there have been many of reports about AUD association with HCV and HIV infection, as well as HCV/HIV co-infection, I still appreciate this review including the new understanding and new ideas and good suggestions you give. Your data will help control of AUD associated problems.

Response: We would like to thank the reviewer for the comments provided.

Comments to Authors:

This manuscript is on the alcohol use disorder and its impact on chronic Hepatitis C Virus and HIV infections. It is well written and is very informative with latest literatures. Although reducing alcohol consumption is quite challenging, I hope this review will draw attention from people to focus on reducing alcohol consumption among individuals with HCV infection or HCV/HIV co-infection for better treatment.

Response: We would like to thank the reviewer for the thoughtful comments provided.
