**Name of Journal:** *World Journal of Cardiology*

**ESPS Manuscript NO:** 27794

The manuscript has been improved according to the suggestions of reviewers:

### 1. Responses to Reviewer 02638028

**Reviewer's comment:**

This manuscript is a fine review about the effect of physical activity on primary and secondary prevention of cardiovascular disease.

**Author's response:**

Thank you for your comment.

### 2. Responses to Reviewer 00259340

**Reviewer's comment:**

The authors present here a nice paper on Physical activity in primary and secondary prevention of cardiovascular disease. This is a relevant topic with clinical implications. The manuscript is up-to-date and well written. However, I would only suggest to the authors the addition of some figures or schemes in order to point out the most important issues (improving its readability) for teaching purposes. Otherwise, I have to congratulate the authors for the review.

**Author's response**

Thank you for your comment. Following your suggestion, we are adding two tables summarizing the benefits of physical activity.

Sincerely yours,
