COMMENTS TO AUTHORS

I completely agree with what is said in the Letter to the Editor by Giuseppe Losurdo, et al in case of article THE ROLE OF CONCOMITANT THERAPY FOR HELICOBACTER PYLORI ERADICATION by Lien-Chieh Lin et al. Meta analysis can give us some additional information only if high quality papers / data are included. In the field of H pylori treatment evaluation of treatment result can only be objectively performed if data about H pylori antimicrobial resistance are present. Any other assessment of treatment results or comparisons between different treatments are prone to bias or false conclusions.

We thank the reviewer for the kind comments.

COMMENTS TO AUTHORS

The Letter to the Editor has truly mentioned considerable issues, although minor grammatical revision is needed. Also, the Citation should be written in the manuscript in accordance with the guideline.

We thank the reviewer for the kind comments. A linguistic revision by a Native English speaker has been performed and the manuscript has been modified according to the editorial requirements.
