

Responses to WJG reviewers comments:

Reviewer #1-Comments: Nice study; Requires some editorial and formatting changes (e.g. do not start a sentence with an abbreviation and do not center the contents in the table etc.). Please run the manuscript through a professional writer. Main concern: Please change the conclusions to match the results - they do not as they stand now.

Answer: The entire manuscript has been reviewed and edited with spelling and grammar and the tables changed as suggested. The conclusions have been modified as suggested with removal of the first two sentences of conclusion removed. All additions were made according to guidelines for retrospective studies.

- 1) This is an interesting paper about the Mesenteric Panniculitis-Like Abnormalities on abdominal CT. I think this paper is acceptable for WJGE.

Answer: Thank you for the encouragement!
