Cognitive correlates of neuroimaging abnormalities in the onset of schizophrenia:

A case report

Grassi Silvia, Orsenigo Giulia, Serati Marta, Caletti Elisabetta, Altamura A Carlo, Buoli Massimiliano

Abstract

Increasing evidence shows that cognitive impairment and brain abnormalities can appear early in the first episodes of schizophrenia, but it is actually debated how brain changes can correlate with clinical presentation of schizophrenic patients. Of note, this report describes the case of a young schizophrenic male presenting parietal MR/PET abnormalities and cognitive impairment, documented by specific neuropsychological tests. In our knowledge only few studies have investigated if neuropsychological
