COMMENTS TO AUTHORS

The manuscript "Role of AXL in invasion and drug resistance of colon and breast cancer cells and its association with p53 alterations" represent an interesting subject which have previously addressed although the precise mechanism underlying these phenomena are still poorly understood. However, there are some concerns including: 1- Abstract may be presented more concisely for readers. 2- In introduction, it would be better to note the other works, previously performed in this field. 3- It is necessary to highlight the novelty of work. 4- The information presented in Tables 3 and 4 may be discussed more in the discussion section.
