**Contrast-induced acute kidney injury: A review of practical points**

**Sercin Ozkok, Abdullah Ozkok**

### **Abstract**

Contrast-induced acute kidney injury (CI-AKI) is one of the most common causes of AKI in clinical practice. CI-AKI has been found to be strongly associated with morbidity and mortality of the patients. Furthermore, CI-AKI may not be always reversible and it may be associated with the development of chronic kidney disease
