Esophagitis and its causes: Who is "guilty" when acid is found "not guilty"?

Laurino Grossi, Antonio Francesco Ciccaglione, Leonardo Marzio

Abstract

Esophagitis is mainly a consequence of Gastroesophageal Reflux Disease, one of the most common diseases affecting the upper digestive tract. However the esophageal mucosa can also be targeted by some infectious, systemic or chemical conditions. Eosinophilic Esophagitis is an immune-mediated inflammatory disease, characterized by eosinophilic infiltration in the mucosa. Esophageal localization of Crohn's disease is not very common, but it should always be considered in patients with inflammatory bowel disease
