

Dear Editor,

The authors are grateful for the helpful comments provided by reviewers. Comments from each reviewer are identified and addressed.

**Reviewer 00057665.**

*"An interesting feasibility study."*

Thank you for your comment.

**Reviewer 02573214**

*"This manuscript is an interesting work of telehealth solution used in order to monitor patients after colorectal surgery. The limits of the work have been described well by the authors."*

Thank you for your comments.

**Reviewer 03035498**

*"This is a very well written article reporting an innovative approach for following patients after discharge. My only comment would be to elaborate more the results section."*

Thank you for your comments. We acknowledge this study did not produce a large volume of results as it was essentially a feasibility study of a technology as opposed to an interventional study.

However, we have added further explanation to the results we did obtain in the results section to highlight the differences between those who were not, and those who were readmitted.

We appreciate the efforts of the reviewers to improve the quality of this manuscript.

Regards,

The authors
