## COMMENTS TO AUTHORS

It is an interesting paper on new therapeutic strategies in WD patients. Do you think that genes modifying the clinical presentation of WD (eg. PRNP) might be new therapeutic targets? If yes, please explain it. Errata should be corrected (eg. please use term Wilson disease or Wilson's disease consistently). Otherwise it is a great work.

## COMMENTS TO AUTHORS

The authors write about an important subject, for gastroenterologists and neurologists. However, the paper needs improvement, mainly with respect to the English writing. It is worth obtaining an English upgrade. There are grammar mistakes and redundant information throughout the text. Sentence connectors and punctuation marks are sometimes inappropriately used. All these make difficult for some sentences to be understood. Minor points. 1) In some sentences of the manuscript, cure is used as synonymous of treatment. 2) Choose Wilson's disease or Wilson disease.
