		<input checked="" type="checkbox"/> No	

### COMMENTS TO AUTHORS

Authors made a "statistical" and "medical" summary about literature on cardiovascular effects of celiac disease (CD). They reached a lot of "medical" data/finding/conclusion from this summary. Therefore I would like to suggest the manuscript divided into 2 part and statistical data to be published in a journal specific to statistic . Comments: \* Table 1 and 2 should ve be omitted. the information should be summ?rized at method section as text. \* The catagoric variables must be given as median/mode and range, defini,tly not as mean i.e there is no 2013.6 or 2012.3 years!!! \* Figures are absent!! \* The sections titled as "myocarditis" and "cardiomyopaty"; "infarction" and "Isch?mic Heart Disease", as well as "Electromechanical Functioning " and "rythmm disturbances" should be combined. \* This sentence should be reviewed for the mean?ng "Screening for CD in children with congenital heart defect is recommended, since serum TTG IgA levels are significantly higher in CD versus control children [159]." TTG IgA must be higher/positive in CD cases than controls! \* does "PoTS" means "postural tachycardia syndrome"?
