Prognostic significance of red blood cell distribution width in gastrointestinal disorders

Goyal H *et al.* Role of RDW in prognosis of gastrointestinal disorders

Hemant Goyal, Giuseppe Lippi, Altin Gjymishka, Bijoy John, Rajiv Chhabra, Elizabeth May

### Abstract

The red blood cell distribution width (RDW) is a routinely measured and automatically reported blood parameter, which reflects the degree of anisocytosis. Recently, the baseline RDW was found to have clinical significance for assessing clinical outcome and severity of various pathological conditions including
