### COMMENTS TO AUTHORS

(1) It is an interesting observation/comment that anti-HIV drugs of different action mechanisms cause irreversible lipodystrophy when used in combination. (2) More detailed descriptions and/or in-depth discussion on the paper by Jones E et al would definitely improve the quality. (3) The describe contents are relevant and insightful to the readers. (4) The content of the manuscript has value for publication.

### COMMENTS TO AUTHORS

1) The abstract should stand alone. Therefore, here authors should provide the complete reference of the article by Jones et al., instead of giving the reference number. 2) Manuscript pages (or lines) should be numbered for proper identification of typos, etc. 3) p. 2, title should read "LIPODYSTROPHY" 4) p. 2, line 9 from bottom: "[2]" should be moved and placed after Caso et al. 5) Legend to Fig. 1. "Jones et al." (delete capital E after Jones in the original) 6) The results of a couple of overlooked references should be briefly mentioned or discussed in the manuscript: Bociąga-Jasik M, Polus A, Góralaska J, Czech U, Gruca A, Śliwa A, Garlicki A, Mach T, Dembińska-Kieć A. ### COMMENTS TO AUTHORS

The commentary "Additional attention to combination antiretroviral therapy (cART)-related lipodystrophy" by Kobayashi et al. is a useful reminder for colleagues involved in the treatment of HIV positive patients. Always, a great attention has to be paid when administering drugs and the knowledge of side-effects that can negatively impact the quality of life of patients must take the clinicians to evaluate all possible alternatives.

### COMMENTS TO AUTHORS

This is a very interesting commentary. It will much better with a more complete expalnation of the figures in the figure legend. For ejample in fig 1: What represent the claud with question marks?
