COMMENTS TO AUTHORS

This is a retrospective study with large sample loss. The p values are not shown in Tables 1 and 2. There is no identification of how confounding variables were selected, why not BMI?

COMMENTS TO AUTHORS

The current manuscript investigated features of the metabolic syndrome (presence of NAFLD) and incidence of adenomatous and hyperplastic polyps. However, there is one relevant limitation: in none of the patients diagnose of NAFLD was not biopsy-proven. I personally do expect a higher incidence of polyps in patients wit NASH as compared to simple steatosis in sense of NAFL.
