COMMENTS TO AUTHORS

This is an interesting basic study on the role of annexin II in gastric cancer tissues comparing to adjacent normal tissues. The authors concluded that annexin II expressed in gastric cancer tissues and promote invasion and metastasis of gastric cancer. However there are some issues that need further clarification: 1. English language should be corrected because in some parts the real meaning the authors wanted to say is not totally understandable. 2. Annexin II is a protein highly expressed in tumor tissues from different tumors such as liver, breast colon, lung etc. So it is not specific for gastric cancer. 3. The authors report about early diagnosis of gastric cancer, however, annexin II is expressed in advanced gastric cancer and in serious disease with poor differentiation. So we think that annexin II cannot add in early gastric cancer diagnosis. 4. This is a basic study and conclusions should be carefully interpreted and diplomatically. No definite conclusions can be made by this basic study.

COMMENTS TO AUTHORS

The authors presented an interesting and well-designed study on the expression of annexin II in gastric cancer tissues compared to adjacent normal tissues; the role of annexin II on the clinical feature of the gastric cancer is analyzed. The authors concluded that annexin II is highly expressed in gastric cancer tissues and has a significant role in promoting the process of cancer invasion and metastasis. - in the introduction/aim/background (title is lacking) the authors stress the importance of methods for early diagnosis of gastric cancer: but the annexin II is present and highly expressed in advanced-stage/metastatic cancer, not in early stage; - this is a preliminary/phase I study: no definitive conclusions are to be allowed; - the English language needs accurate polishing and revision. There is a systematic use of commas instead of full-stops, capital letter after commas etc; some sentences are doubled; in Methods section, it looks like a "copy&paste" of some to-do-list/check-list. As result, the

manuscript often results as hard-reading and scarcely intelligible. These are, it's true, minor remarks about a technical article. Anyway, in my view, they can indicate a not acceptable lack of attention by the authors on checking a manuscript before it's submitted for publishing.
