COMMENTS TO AUTHORS

This is an interesting study about the efficacy and safety of Sofosbuvir and Daclatasvir in treatment of kidney transplantation (KT) recipients with hepatitis C virus (HCV) infection. In this study, the authors enrolled a prospective cohort of consecutive chinese KT patients with HCV infection. They were given sofosbuvir combined with daclatasvir with or without ribavirin. They were monitored regularly during and after the treatment. Sofosbuvir and daclatasvir in treatment of KT recipients with HCV infection are highly efficient and well safe. The tolerance to sofosbuvir and daclatasvir was excellent and no serious adverse event was observed. Larger prospective cohort are needed in future. Over all, the study is well designed, and the results are interesting. 1 The title can be revised to "Efficacy and Safety of Sofosbuvir and Daclatasvir in Treatment of Kidney Transplantation Recipients with Hepatitis C Virus Infection". 2 The manuscript need to be revised by an native English speaker. There are some language polishing. 3 The method and results section should be checked. How about the statistical methods? It
