## COMMENTS TO AUTHORS

The manuscript reviews genetic alterations in PACC patients. 1. In page 6, it is described that the mutations in the BRCA1, BRCA2 and RB1 genes along with mutations in the WNT-beta-catenin pathway were observed. It is more comprehensive if the mutations in APC and CTNNB1 are matched or co-occurred with BRCA or RB genes in the PACC patients. 2. Some abbreviations are not appropriately shown, for example, acinar cell carcinoma appears after ACC was introduced in introduction and PACC and pancreatic ACC are both used. Please carefully check them including the figure legend.

## COMMENTS TO AUTHORS

Manuscript Number: 35219, titled „ Pancreatic Acinar Cell Carcinoma: A review with molecular profiling on patients“. In this review article authors present rare type of pancreatic cancer (pancreatic acinar cell carcinoma), with a series of molecularly profiled cases and an insight on how to potentially target specific mutations and genetic abnormalities with different systemic treatments. Authors concluded that molecular profiling of pancreatic acinar cell carcinoma should be an option for patients with refractory pancreatic acinar cell carcinoma. This review article is interesting and well organized and written, and I'm sure that brings useful information to the scientific community and clinical practice.

## COMMENTS TO AUTHORS

A Figure which showed the molecular profiling on patients with pancreatic Acinar cell carcinoma is better.
