## COMMENTS TO AUTHORS

This is well described case report of a very rare complication of liver transplantation- a cystic duct mucocele mimicking a gallbladder. The illustrations are excellent. The authors should following the authors' instructions for reference citations.

## COMMENTS TO AUTHORS

It is a interesting case on biliary mucocoeles after deceased donor liver transplantation that is a rarity. The clinical data of the patient were presented detailedly, with review of relevant literature in which donor duct mucocoeles were reported without encountering a recipient duct mucocoele. The information provided by the present study is helpful to prevent and deal with this rare postoperative complication of liver transplantation. However, the author didn't clearly explain the possible cause of recipient cystic duct mucocoele in this patient, it may be due to blocking cystic duct orifice by covered stent. We don't know what would happen to this mucocoeles after stent removal.
