Imaging of gall bladder by endoscopic ultrasound

Malay Sharma, Piyush Somani, Tagore Sunkara

Abstract

Endoscopic ultrasonography (EUS) is considered a superior investigation when compared to conventional ultrasonography (US) for imaging Gall bladder (GB) lesions as it can provide high-resolution images of small lesions with higher ultrasound frequencies. Examination of GB is frequently the primary indication of EUS imaging. Imaging during EUS may not remain restricted to one station and multi-station imaging may provide useful
