COMMENTS TO AUTHORS

It is an interesting study in old population. Usually the H. pylori has issues of infection and re-infection; how it was tackled? The improvement in body weight and anemia could be simply due to increased appetite, absorption or ant systemic effect of h. pylori infection. This need further study, analysis and explanation

COMMENTS TO AUTHORS

This is an interesting paper with useful clinical information regarding HP eradication in elder patient. One minor suggestion: Maybe the authors need justified the cut point of Hb : 12.5 g/dl

COMMENTS TO AUTHORS

This is an interesting manuscript on Helicobacter pylori eradication therapy on the extra-gastrointestinal factors in elderly patients. Conclusion should be more cautious. Limitation of the study have to be addressed and a call to further ad hoc better designed studies has to be made in the conclusion section. Finally future perspectives have to be better described in the discussion section. The manuscript should be revised by a native speaker of English.

COMMENTS TO AUTHORS

The paper is a single centre experience of the effect of H. pylori eradication on anthropometric and haematological parameters in elderly patients treated in community setting. The paper is well written and does have important message. I would recommend its acceptance in the journal.
