COMMENTS TO AUTHORS

This is a retrospective observational study, comparing the clinical features of AH in two ethnics. The number of cases compared are different too much and actually small (64 Latino,) therefore, I am not sure whether this study can contribute for the future prospective study.

COMMENTS TO AUTHORS

Pinon-Gutierrez, et al. retrospectively compared the clinical features of alcoholic hepatitis (AH) in Latinos and Caucasians. They found that Latinos have significant higher rates of utilization of acute care services for manifestations AH and complications, suggesting poor access to outpatient care. The study is well performed and well-written. My only concern is that the abbreviations in the abstract should be explained.
