COMMENTS TO AUTHORS

Firstly, I would like to thank to editor for giving opportunity to me to review this article. Gastric antral vascular ectasia (GAVE) is rare condition but causes major upper gastrointestinal bleeding (UGB). In clinical practice it can be first symptom of UGB so, it must be diagnosed and treated. By the using gastrointestinal endoscopy in clinical practice, some treatment modalities are developed recently. This article reflects important outcomes of the multimodal endoscopic therapy in the treatment of GAVE. It can be considered for publication after minor revisions below. 1. Please do not use abbreviations in the abstract and the title of the paper. 2. Re-arrange the references according the journal's style.

COMMENTS TO AUTHORS

Minor comments 1) Authors have to explain ASA, MAC and MENa in Table 1. 2) Authors need to show figure legends (Figure 1-4).

COMMENTS TO AUTHORS

The authors did a good retrospective study of their therapeutic experiences of GAVE. However, I have the following comment: (1) It is highly appreciated to make a suggested flow chart of treatment strategy according to your experience. (2) Please add the literature review of this disease and treatment.
