COMMENTS TO AUTHORS

The author provide a very good paper with solid data about an underestimated issue in the field of GEP-NET. I have only a major concern: redundancy. Several parts of discussion and introduction should be eliminated, this is a medical journal and not a book chapter.

Answer: Many thanks for your comments. We have shortened the introduction and discussion greatly – removing over 800 words from the total count and eliminating much unnecessary detail, whilst still maintaining the important points relevant to our article.
