Università degli Studi di Trieste

UPON REQUEST 27<sup>th</sup> December 2017

TO WHOM IT MIGHT CONCERNS

The secretary of the Institutional Review Board Statement declare that:

June 2007 Rita Moretti and Claudio Tiribelli presented the observational study on chronic liver failure and Restless Leg.

Benefits of this observational study have been declared by the Authors as following:

- implement the diagnosis of RLS in chronic liver patients
- detect possible diagnostic instruments to improve the diagnosis
- report the possible drug therapies
- evidence the eventual augmentation phenomenon

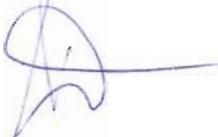

The Authors declared and stated that their work:

1. is in complete accordance with the Declaration of Helsinki
2. will be done with the fully respect of the general Neurological Guidelines and therapeutic Choices declared as universal statement (<http://www.rls.org>) registering
3. the authors do not choose any experimental or not approved drugs, but will employ world-accepted medical therapies (i.e. Pramipexole and Gabapentin)

This observational study has been reviewed by the Committee of Research of Cattinara Hospital.

This board had decided to approve the results of the observational study and licensed this document ID: 2008-dec-123 the 12<sup>th</sup> December 2008.

The secretary
