**COMMENTS TO AUTHORS**

1、 Since the title of this paper emphasized that primary hepatic peripheral T-Cell lymphoma is exceedingly rare,it could be necessary to introduce the incidence of the disease. 2、 The part of Discussion is not deep enough. The entire discussion section did not specifically analyze the characteristics of this case, let alone the difference between this and the othercases, which can really inspireclinicians. 3、 The third paragraph of the discussion section only mentioned the biochemical abnormalities of this case. It will be more concrete to add some clinical analysis of this patient. 4、 The last two paragraphs of the discussion section described the prognosis and treatment of this disease in recent years but did not combined with the specific case. It is best to analyze this case in more detail than a general one. 5、 Full-text chartsmay be too single that there is only one immunohistochemical figure. Avariety of biochemical or clinical data could be sorted

out into a form of charts, so that the article looks more vivid and full. 6、 In order to introduce some of the latest insights into the disease, it's best to have some more up-to-date references since most references of this paper may be not new enough. 7、 English expression may not be appropriate: 1)、 Improper use of single and plural. For example, the last sentence of paragraph 1 in Page 3 "...a 37 yearold male patient..." should be changed to "...a 37 yearsold male patient...". 2)、 Grammatical errors such as misusing of prepositions and lacking of verbs. For example, the fifth sentence of paragraph 2 in Page 3 "...oxygen saturation of 94%.
