

## PEER-REVIEW REPORT

**Name of journal:** World Journal of Gastroenterology

**Manuscript NO:** 37038

**Title:** Placement of metal stents for refractory pancreatic duct stricture in children

**Reviewer's code:** 00058446

**Reviewer's country:** China

**Science editor:** Ze-Mao Gong

**Date sent for review:** 2017-11-11

**Date reviewed:** 2017-11-22

**Review time:** 11 Days

## COMMENTS TO AUTHORS

This was a retrospective study for evaluating of the feasibility, safety, and therapeutic effect of fully covered self-expandable metal stents (FCSEMSs) for the management of benign main pancreatic duct (MPD) strictures in pediatric patients with chronic pancreatitis (CP). The placement and removal of the FCSEMSs were technically and clinically successful without adverse events or stent obstruction, and the findings support its applicability to the pediatric population. 1. How long was the right time of FCSEMSs placed for MPD strictures in pediatric patients with chronic pancreatitis? How to decide? 2. How to make sure the benign main pancreatic duct (MPD) strictures with chronic pancreatitis (CP) in pediatric patients
