COMMENTS TO AUTHORS

Li et al aimed to investigate the predictive value of the mutational status of PIK3CA and TP53 in colorectal cancer (CRC) patients treated with 5-fluorouracil-based chemotherapy after curative surgery. I have some comments and corrections detailed as follows: Introduction: Introduction caption is missing. In vitro and in vivo term in italics. Use CRC abbreviations across the whole manuscript. MM section. The sentence miss a verb: Tumor staging strictly abided by the TNM classification of the American Joint Committee on Cancer (AJCC). The QIAamp DNA FFPE Tissue Kit is specially designed for purifying DNA from formalin-fixed, paraffin-embedded tissue sections. Why QIAamp DNA Mini Kit was used for isolation of genomic DNA from FFPE? Which version of Stata software was used for statistical analysis? Results: Please characterize in detail the PIK3CA-TP53 mutations observed in your study. Is any

mutation observed predominantly? Is OS associated with any particular mutation as well? Discussion: PIK3CA mutation were observed predominantly in rectum. Do you have hypothesis why it is so? The word against in sentence is controversial? Do you mean in CRC treatment? - The effectiveness of 5-FU-based chemotherapy is very limited against colorectal cancer.
