Should hot biopsy forceps be abandoned for polypectomy of diminutive colorectal polyps?

Panteris V *et al.* Hot biopsy forceps and eradication of diminutive colorectal polyps

Vasileios Panteris, Antonios Vezakis, JK Triantafillidis

Abstract

Standardized approach to polypectomy of diminutive colorectal polyps (DCPs) is lacking since cold biopsy forceps have been associated with high levels of recurrence, hot biopsy forceps are considered inadequate and risky and cold snaring is currently under investigation for its efficacy and safety.
