SPECIFIC COMMENTS TO AUTHORS

Excellent article. I agree with everything that the authors wrote. The authors very reasonably and skillfully wrote about the urgent problems, which, as I know, my colleagues are beginning to discuss. My opinion is that this article should be published

SPECIFIC COMMENTS TO AUTHORS

Helicobacter pylori (H. pylori) infection plays an important role in gastric carcinogenesis. Eradication of H. pylori has been reported to reduce the risk of gastric cancer among asymptomatic individuals in high-risk areas. Therefore, it is advocated to eradication of

H. pylori, in clinical work, so as to reduce the risk of gastric cancer. However, the endoscopic appearance of metachronous gastric cancer after eradication treatment becomes atypical, which can easily lead to misdiagnosis. The authors conducted a review article that summarized the clinical characteristics of gastric cancer that developed after H. pylori-eradication therapy, as well as the predictors of primary gastric cancer. It may help physicians better understand metachronous gastric cancer after eradication of H. pylori. However, there are some issues which need to be addressed. 1. In the analysis of the predictive factors of gastric cancer after H. pylori eradication, whether there were analyses on some clinically relevant factors, such as family history, smoking and drinking history and so on. In addition to the characteristics and predictive factors of gastric cancer after H. pylori eradication, is it possible to compare the different prognosis of with H. pylori infection or after H. pylori eradication? 2. There are a few spelling errors that should be checked carefully and corrected throughout the manuscript. 3. In addition, the authors cited several articles that they have published in this manuscript.

SPECIFIC COMMENTS TO AUTHORS

A comprehensive review evaluating the predictive factors for the development of gastric cancer after H.pylori eradication. The article needs minor English polishing. It is better to use "endoscopic and histological" instead of "clinical", because these are not
