Eleni Gigi, Vasileios I Lagopoulos, Eleni Bekiari

**Abstract**

Hepatitis C virus (HCV) chronic infection induces liver fibrosis and cirrhosis but is also responsible for a significant portion of hepatocellular carcinoma (HCC) occurrence. Since it was recognized as a causative factor of chronic hepatitis, there have been multiple efforts towards viral eradication, leading to the first-generation HCV treatment that was based on interferon (IFN)- $\alpha$  and its analogs, mainly PEGylated interferon- $\alpha$  (PEG IFN $\alpha$ ). Sustained virological response (SVR), defined as the absence of detectable RNA of HCV in blood serum for at least 24
