Associations between nonalcoholic fatty liver disease and ischemic stroke

Stelina Alkagiet, Achilleas Papagiannis, Konstantinos Tziomalos

**Abstract**

Nonalcoholic fatty liver disease (NAFLD) is the commonest chronic liver disease and affects a considerable proportion of the general population. NAFLD is independently associated with increased risk for cardiovascular events, particularly coronary heart disease. Importantly, even though NAFLD is more prevalent in patients with major cardiovascular risk factors (e.g. type 2 diabetes mellitus, obesity and hypertension), the association between NAFLD and
