

ANSWERING REVIEWERS

Vasuri et al. summarized the papers published in 2017 investigating the role of miRNAs in HCC. The roles of miRNAs in the molecular pathways of HCC, including mTOR pathway, Wnt pathway, JAK-STAT pathway, apoptosis, and MAPK cascade were discussed. The associations of miRNAs with post-surgical outcomes, and responses to chemotherapy were also discussed. This review is well-written, and well organized. The authors have reviewed and analyzed a sufficient amount of literature. This review makes a contribution to studies concerning the better understanding of the role of miRNAs in HCC. Future directions on the study of miRNAs in HCC is suggested to be mentioned in the last paragraph.

A sentence suggesting the possible future directions on the argument has been added in the “Conclusion Section”, as requested by the reviewer.

Please provide language certificate letter by professional English language editing companies (Classification of manuscript language quality evaluation is B).

For manuscripts submitted by non-native speakers of English, please provided language certificate by professional English language editing companies mentioned in ‘**The Revision Policies of BPG for Article**’.

- **The entire manuscript has been now revised by a native speaker of English (Dr. Thomas Brand). For this reason, Dr. Brand has been added to the authors’ list.**
- **Please note that a second Copyright License agreement, with the signature of Dr. Brand, has been uploaded**
- **Postcode has been added where requested**
- **ORCID number has been added in the main manuscript for all the authors**
- **Abstract has been extended.**
- **Audio core tip (performed by Dr. Brand) has been now uploaded**
- **All authors abbreviation name and manuscript title have been added where requested.**

- **PMID or PMCID and doi have been added for all references. Moreover, all authors have now been listed in each reference.**
- **Original pictures have been uploaded as ppt files**
