Predictive factors for anastomotic leakage after laparoscopic colorectal surgery

Sciuto A *et al.* Risk factors for anastomotic leakage

Antonio Sciuto, Giovanni Merola, Giovanni D De Palma, Maurizio Sodo, Felice Pirozzi,
Umberto M Bracale, Umberto Bracale

Abstract

Every colorectal surgeon during his or her career is faced with anastomotic leakage (AL); one of the most dreaded complications following any type of gastrointestinal anastomosis due to increased risk of morbidity, mortality, overall impact on functional and oncologic outcome and drainage on hospital resources. In order to understand and give an overview of the AL risk factors in laparoscopic colorectal surgery, we carried out a careful review of

2016年6月9日 - Background. **Anastomotic leakage** (AL) remains the most important complication following **colorectal surgery**, and is associated with high morbidity and mortality rates. Previous research has focused on identifying risk **factors** and potential biomarkers for AL, but the sensitivity of these tests remains poor.
