Contemporary role of liver biopsy in hepatocellular carcinoma

Zeno Sparchez, Tudor Mocan

Abstract

A correct diagnosis of hepatocellular carcinoma (HCC) in cirrhotic patients with focal liver lesions is one of the most important issues nowadays. Probably one of the oldest debates in the hepatology community is whether to perform liver biopsy (LB) in all cirrhotic patients with focal liver lesions. We now face a time when oncology is moving towards personalized medicine. According to the current European Association for the study of Liver diseases HCC guidelines, LB has only a minor role in the management of HCC. However, the current recommendations were made more than 5 years ago. The time has passed, and along with it the development of high-throughput molecular technologies has allowed to define the main molecular mechanism involved in HCC development and progression. Several subtypes of HCC with both molecular
