Vedolizumab for inflammatory bowel disease: From randomized controlled trials to real-life evidence

Scribano ML. Vedolizumab for IBD

Maria Lia Scribano

Abstract

The biologic antitumor necrosis factor alpha (anti-TNF α) agents have revolutionised the treatment of inflammatory bowel disease (IBD). However, some patients experience primary nonresponse, loss of response, or intolerance. Therefore, introducing a newer class of therapy with a mechanism of action that acts on different inflammatory pathways involved in IBD pathogenesis is appealing. Vedolizumab is a fully humanised monoclonal
