SPECIFIC COMMENTS TO AUTHORS

The manuscript is regarding to a case series study of submucosal injection of platelet rich plasma in endoscopic resection large sessile lesions. Submucosal inj. Of platelet rich plasma is a novel design in endoscopic technique. However, there are several points to

SPECIFIC COMMENTS TO AUTHORS

This is a quite interesting and clever or innovative try in a problem that annoys the most of endoscopist today. The planing, the title and the way the hole studie was performed seems to have a good concordance and proffessionalism. Some issues that stills worth to

mention is the relative small number of patients, why only 11. Does this have to do with the hole procedure of cathetering PRP or the cost of the hole procedure? In this case we cant accept the method as an easy to apply and cost effective. The EMR terminology needs an abbreviate explanation about what it is because all readers may not work with such terms every day.

SPECIFIC COMMENTS TO AUTHORS

Good proof of concept study. Need a larger study to validate the findings. It would good to compare to other techniques used for lifting polyps during EMR or ESD.

SPECIFIC COMMENTS TO AUTHORS

Platelet-rich plasma (PRP), as a new submucosal injection for EMR, is an easy-to-obtain solution with proven and favourable biological activities, and may have a good prospective in endoscopic therapeutic practice. As a submucosal injection, its

https://www.wjgnet.com

convenience and effectiveness of performance should be known. So how much PRP has been used for one patient? How long the mean procedure time for EMR is?
