**Algorithm for the multidisciplinary management of hemorrhage in
EUS-guided drainage for pancreatic fluid collections**

Tian-An Jiang, Li-Ting Xie

Abstract

Pancreatic fluid collections (PFCs), common sequelae of acute or chronic pancreatitis, are broadly classified as pancreatic pseudocysts (PPC) or walled-off necrosis (WON) according to the revised Atlanta classification. Endoscopic ultrasound (EUS)-guided drainage is often considered a standard first-line therapy, preferable to surgical or interventional radiology approaches, for patients with symptomatic PFC. EUS-guided drainage is
