Balo's concentric sclerosis in a patient with spontaneous remission based on magnetic resonance imaging: A case report and review of literature

Özgür Ertuğrul, Esra Çiçekçi, Mehmet Cudi Tuncer, Mehmet Ufuk Aluçlu

Abstract

Balo's concentric sclerosis (BCS) is a rare monophasic demyelinating disease known as multiple sclerosis subtype (MS) and seen as a round lesion with variable hyper and hypo-detoxification layers. Characteristic appearance can be seen as "bulb eye" or "onion bulb". The initial terminology for this neurological disorder was leukoencephalitis periaxialis concentrica; this is defined as a disease in which the white matter of the brain is destroyed in concentric layers in such a way as to leave
